

Precleaners

Used most often in extremely dusty environments such as the mining, desert, and logging industries, Precleaners help reduce the dust load and extend periods between servicing by lengthening the life of filter elements. Precleaners attach to an air cleaner's inlet tube and act as a centrifugal type air cleaner by removing the large particles and greater portion of dust from the air cleaner's intake air. Vortox Air Technology's Precleaners feature no gaskets or air seals, which can be broken, and always provide the maximum dust removal efficiency. All Vortox Air Technology Precleaners are entirely fabricated of Electro Galvanized coated Carbon Steel and finished with a black baked polyester powder coat to maintain peak performance and durability for years.

Precleaners

Model No.	A (mm.)	B (mm.)	C (mm.)	D (mm.)	Net Wt. KG
P60D	153.92	128.52	57.40	26.92	0.91
