

CFA Inlet Caps

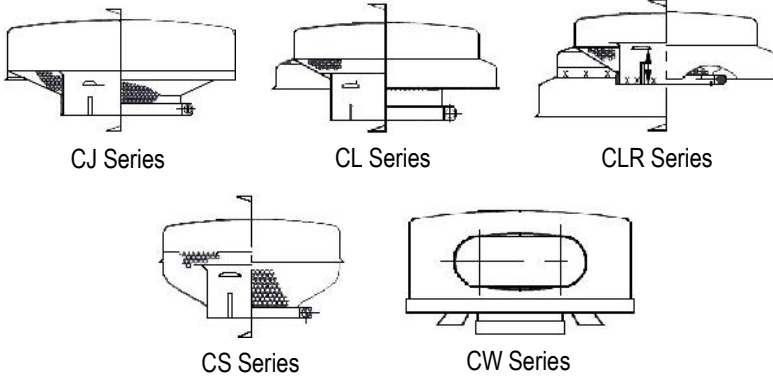

The CFA or Forced Air style Inlet Cap is designed for truck use at highway speeds. Its angled screen eliminates the accumulation of snow and ice, which will shut down the engine. The frontal air intake design allows water to move to the back of the cap and drain out the slot.

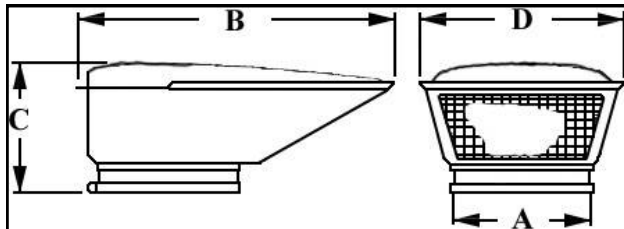

Vortex Air Technology Inlet Caps

Inlet Caps are an essential component in the protection of filter elements used in dry and oil bath air cleaners. They function as a pre-filtering mechanism for the air cleaner, preventing large particles of debris from potentially harming the air cleaner and filter element in addition to shielding water ingress.
