

Bottom Outlet

If you are looking for a more economical approach to protect your blower, our AN140W model with Inlet Cap are the answer. This air cleaner is designed as pressure only, single stage, with a high air flow design that will protect your blower and keep it running clean. If you need a pressure/vacuum design in this configuration, we have an answer for that, too. Simply remove the Inlet Cap and use a Vortex Air Technology 21327 adapter that fits the 6" air cleaner OD inlet and has a 4" NPT Camlock fitting to accept the hose from the trailer.

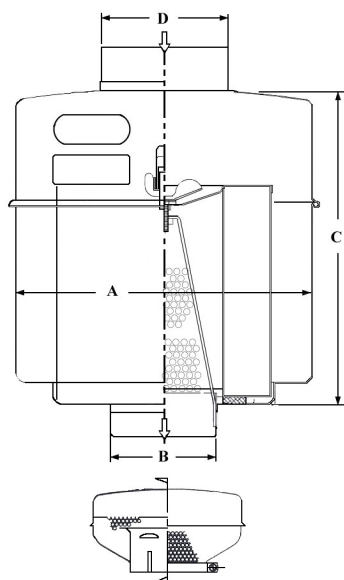

AN140W can be mounted using Vortex Air Technology BB140 Band Brackets. Together with our CL14060 or CS600 Inlet Cap, this combination can answer a variety of needs.

The AN140W-K comes complete with (2) mounting brackets and (1) CL14060 inlet cap.

Vortex Air Technology Truck Blower Air Cleaners

Constructed of 16 gauge Electro Galvanized Steel and finished with a durable polyester powder coat paint, the AN140W will provide years of service for many applications. The outer housing is constructed using Deep Draw Technology which ensures a seamless, one-piece construction of the body and head components.
